

**Code Update  
API & AMPP**

# Code Updates

---

## API Upstream

- Mandatory to perform NDT on specific parts and weldments where previous editions were informative and only required when requested by the purchaser.

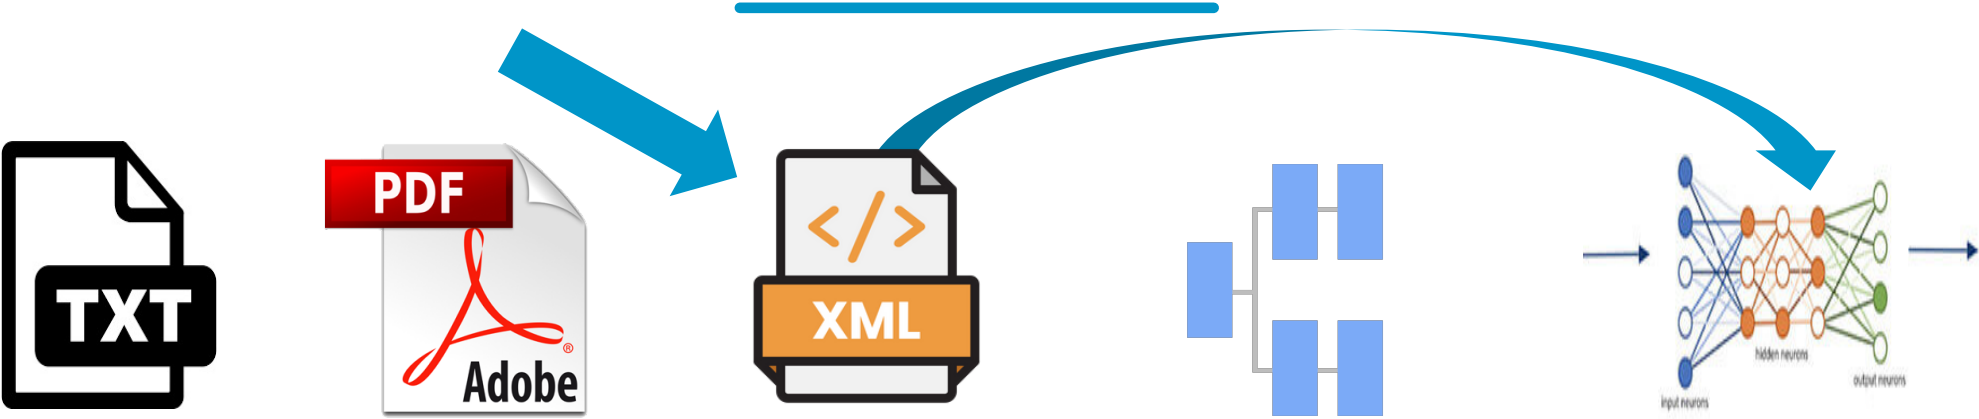

## API SC20

- API Upstream to recognizing 20D
- QMS review and push to ISO 17025
- Additive Manufacturing document released

## AMPP (NACE)

- No technical changes but multiple re-writes are under way.
- Harmonizing the language of Technician requirements

# Smart Standards

Level 0	Level 1	Level 2	Level 3	Level 4
Paper documents (its not suitable for machine consumption)	Machine can display the document	Machine can identify structure and perform basic actions no the document	Machines can isolate specific types or instances of content (components) and perform more complex actions based on the content	Machines can either execute the component or interpret it is such a way as to take complex actions

THANK YOU
